## Handgun

Depending on the type of gun, you may be able to adjust either the front or rear sight, or you might have to make adjustments to both. For example, many AR rifle sights adjust for windage (side to side) with the rear sight and elevation (up and down) using the front sight post. Older guns like "cowboy" lever action rifles are exactly the opposite.

more common. Sometimes, the red dot sight will come with one.

How to Adjust a Red Dot Sight User Guide For Beginner

Adjust Iron Sights On A Fixed-Sight Revolver There are two directions to adjust on a sight: Vertical and horizontal. Do not make vertical (up-down) adjustments until you have the revolver hitting on the centerline horizontally (left-right adjustments). Adjusting the horizontal is done by turning the barrel fractionally in or out of the frame.

scoring ring widths there are left or right to the center of the target. 2. Adjust elevation.

### NRA Family | How to Adjust Your Iron Sights

A gross adjustment on a fixed sight system might require more than just a simple movement of the front sight. It may need some machine work to the rear, or even a new front sight. Carefully determine the amount of error, at a couple of known distances, and with any ammunition you might be inclined to use.

To adjust for windage, gently move the rear sight blade to the right or left by tapping at the dove-tail using a wood or fiber dowel or hammer that will not mar the sight (See Figure 17). If you tap to the right your gun will shoot more to the right. Moving the blade holder to the left is just as easily done.
