New cells are formed by the process of cell division which includes both the division of the cell ' s nucleus (mitosis) and the division of the cells cytoplasm (cytokinesis). Mitotic nuclear division typically rests in new somatic(body) cells.

LAB . MITOSIS AND CANCER

In previous years, biology students would view slides in the lab and analyze data on cancer and mitotic index. (Investigation: Mitosis and Cancer) This at-home activity only looks at the mitosis of onion cells and I plan to add cancer and mitotic index as a separate activity. I used a microscope camera to take photos of onion root slides where students can count the number of cells in each phase and use those numbers to calculate the amount of time spent in each.

Mitosis is closely controlled by the genes inside every cell. Sometimes this control can go wrong. If that happens in just a single cell, it can replicate itself to make new cells that are also out of control. These are cancer cells. They continue to replicate rapidly without the control systems that normal cells have.
