"Helen Hawthorne quietly goes undercover at a local library to search for a missing masterpiece. When a dead body turns up in the parking lot, she's determined to find the killer as well"--

Both broad and deep in coverage, Rubenstein shows that fluid mechanics principles can be applied not only to blood circulation, but also to air flow through the lungs, joint lubrication, intraocular fluid movement and renal transport. Each section initiates discussion with governing equations, derives the state equations and then shows examples of their usage. Clinical applications, extensive worked examples, and numerous end of chapter problems clearly show the applications of fluid mechanics to biomedical engineering situations. A section on experimental techniques provides a springboard for future research efforts in the subject area. Uses language and math that is appropriate and conducive for undergraduate learning, containing many worked examples and end of chapter problems All engineering concepts and equations are developed within a biological context Covers topics in the traditional biofluids curriculum, as well as addressing other systems in the body that can be described by biofluid mechanics principles, such as air flow through the lungs, joint lubrication, intraocular fluid movement, and renal transport Clinical applications are discussed throughout the book, providing practical applications for the concepts discussed.

Newly appointed police inspector Domenic Jejeune doesn't mind ruffling a few feathers to flush out suspects in the brutal murder of a renowned ecological activist. 2015 Arthur Ellis Award — Winner, Best First Novel • Globe and Mail 100: Best Books of 2014 • 2015 Kobo Emerging Writer Prize — Shortlisted, Best Mystery Inspector Domenic Jejeune's success has made him a poster boy for the U.K. police service. The problem is Jejeune doesn't really want to be a detective at all; he much prefers watching birds. Recently reassigned to the small Norfolk town of Saltmarsh, located in the heart of Britain's premier birding country, Jejeune's two worlds collide when he investigates the grisly murder of a prominent ecological activist. His ambitious police superintendent foresees a blaze of welcome publicity, but she begins to have her doubts when Jejeune's most promising theory involves a feud over birdwatching lists. A second murder only complicates matters. To unravel this mystery, Jejeune must deal with unwelcome public acclaim, the mistrust of colleagues, and his own insecurities. In the case of the Saltmarsh birder murders, the victims may not be the only casualties.

Magdalen College, where C.S. Lewis taught in Oxford, was an appropriate site for the "Informing the Inklings" conference hosted by the George MacDonald Society. Participants explored how MacDonald and fellow literary figures such as S.T. Coleridge, Lewis Carroll, Charles Kingsley, and Andrew Lang paved the way for 20th century fantasists such as C.S. Lewis and J.R.R. Tolkien. The twelve essays collected in this book examine this rich lineage of mythmakers. Contributors include Stephen Prickett, Malcolm Guite, Trevor Hart, and Jean Webb as well as other Inklings experts. Like the authors they write about, these scholars believe imaginative fiction has the power to enrich and even change our lives.

This extraordinary collection perfectly portrays the architectural, geographic and historical significance of ruins that are considered world wonders and little-known gems. Included are monumental temples of Mexico's Mayan civilization, a Colonial era palace on the island of Haiti, earthquake-ravaged cathedrals in Guatemala, and astonishing Incan citadels in Peru's Sacred Valley - culminating with the breathtaking beauty of Machu Picchu. This unprecedented publication transports the reader on a journey to ancient temples, abandoned palaces and lofty citadels. Evocative and enlightening, Lost Worlds will stir the imagination of those with a passion for photography, travel, history, architecture, and archeology. Shot in infrared format on a specially adapted digital camera, these images expose crumbling, overgrown walls, broken columns, and cracked arches in ways most readers have never seen. They will offer readers a new way of viewing the landscape as well as an enhanced vision of the collective identity of the Americas. Includes a foreword by noted travel writer Pico Iyer and text by Arthur Drooker explaining each site's rise, fall and lasting significance.

Understanding human hearing is not only a scientific challenge but also a problem of growing social and political importance, given the steadily increasing numbers of people with hearing deficits or even deafness. This book is about the highest level of hearing in humans and other mammals. It brings together studies of both humans and animals thereby giving a more profound understanding of the concepts, approaches, techniques, and knowledge of the auditory cortex. All of the most up-to-date procedures of non-invasive imaging are employed in the research that is described.

For Fluid Mechanics courses found in Civil and Environmental, General Engineering, and Engineering Technology and Industrial Management departments. Fluid Mechanics is intended to provide a comprehensive guide to a full understanding of the theory and many applications of fluid mechanics. The text features many of the hallmark pedagogical aids unique to Hibbeler texts, including its student-friendly, clear organisation. The text supports the development of student problem-solving skills through a large variety of problems, representing a broad range of engineering disciplines that stress practical, realistic situations encountered in professional practice, and provide varying levels of difficulty. The text offers flexibility in that basic principles are covered in chapters 1-6, and the remaining chapters can be covered in any sequence without the loss of continuity. Updates to the 2nd Edition result from comments and suggestions from colleagues, reviewers in the teaching profession, and many of the author's students, and include expanded topic coverage and new Example and Fundamental Problems intended to further students' understanding of the theory and its applications.
