The bestselling citizen's guide to economics Basic Economics is a citizen's guide to economics, written for those who want to understand how the economy works but have no interest in jargon or equations. Bestselling economist Thomas Sowell explains the general principles underlying different economic systems: capitalist, socialist, feudal, and so on. In readable language, he shows how to critique economic policies in terms of the incentives they create, rather than the goals they proclaim. With clear explanations of the entire field, from rent control and the rise and fall of businesses to the international balance of payments, this is the first book for anyone who wishes to understand how the economy functions. This fifth edition includes a new chapter explaining the reasons for large differences of wealth and income between nations. Drawing on lively examples from around the world and from centuries of history, Sowell explains basic economic principles for the general public in plain English.

INTERNATIONAL BESTSELLER "For anyone who wants to understand capitalism not as economists or politicians have pictured it but as it actually operates, this book will be invaluable."-Observer (UK) If you've wondered how we did not see the economic collapse coming, Ha-Joon Chang knows the answer: We didn't ask what they didn't tell us about capitalism. This is a lighthearted book with a serious purpose: to question the assumptions behind the dogma and sheer hype that the dominant school of neoliberal economists-the apostles of the freemarket-have spun since the Age of Reagan. Chang, the author of the international bestseller Bad Samaritans, is one of the world's most respected economists, a voice of sanity-and wit-in the tradition of John Kenneth Galbraith and Joseph Stiglitz. 23 Things They Don't Tell You About Capitalism equips readers with an understanding of how global capitalism works-and doesn't. In his final chapter, "How to Rebuild the World," Chang offers a vision of how we can shape capitalism to humane ends, instead of becoming slaves of the market.

Advances in artificial intelligence (AI) highlight the potential of this technology to affect productivity, growth, inequality, market power, innovation, and employment. This volume seeks to set the agenda for economic research on the impact of AI. It covers four broad themes: AI as a general purpose technology; the relationships between AI, growth, jobs, and inequality; regulatory responses to changes brought on by AI; and the effects of AI on the way economic research is conducted. It explores the economic influence of machine learning, the branch of computational statistics that has driven much of the recent excitement around AI, as well as the economic impact of robotics and automation and the potential economic consequences of a still-hypothetical artificial general intelligence. The volume provides frameworks for understanding the economic impact of AI and identifies a number of open research questions. "Eleven fully updated chapters include entries on the links between health and discrimination, income inequality, social networks and emotion, while four all-new chapters examine the role of policies in shaping health, including how to translate evidence into action with multi-level interventions."

New York Times Bestseller • Notable Book of the Year • Editors' Choice Selection One of Bill Gates' " Amazing Books " of the Year One of Publishers Weekly' s 10 Best Books of the Year Longlisted for the National Book Award for Nonfiction An NPR Best Book of the Year Winner of the Hillman Prize for Nonfiction Gold Winner • California Book Award (Nonfiction) Finalist • Los Angeles Times Book Prize (History) Finalist • Brooklyn Public Library Literary Prize This " powerful and disturbing history " exposes how American governments deliberately imposed racial segregation on metropolitan areas nationwide (New York Times Book Review). Widely heralded as a " masterful " (Washington Post) and " essential " (Slate) history of the modern American metropolis, Richard Rothstein' s The Color of Law offers " the most forceful argument ever published on how federal, state, and local governments gave rise to and reinforced neighborhood segregation " (William Julius Wilson). Exploding the myth of de facto segregation arising from private prejudice or the unintended consequences of economic forces, Rothstein describes how the American government systematically imposed residential segregation: with undisguised racial zoning; public housing that purposefully segregated previously mixed communities; subsidies for builders to create whites-only suburbs; tax exemptions for institutions that enforced segregation; and support for violent resistance to African Americans in white neighborhoods. A groundbreaking, " virtually indispensable " study that has already transformed our understanding of twentieth-century urban history (Chicago Daily Observer), The Color of Law forces us to face the obligation to remedy our unconstitutional past.

A funny, clever, and thought-provoking examination of the myth of the "economic man" and its impact on the global economy How do you get your dinner? That is the basic question of economics. When economist and philosopher Adam Smith proclaimed that all our actions were motivated by self-interest, he used the example of the baker and the butcher as he laid the foundations for "economic man." He argued that the baker and butcher didn't give bread and meat out of the goodness of their hearts. It's an ironic point of view coming from a bachelor who lived with his mother for most of his life—a woman who cooked his dinner every night. Nevertheless, the economic man has dominated our understanding of modern-day capitalism, with a focus on self-interest and the exclusion of all other motivations. Such a view point disregards the unpaid work of mothering, caring, cleaning and cooking. It insists that if women are paid less, then that's because their labor is worth less. Economics has told us a story about how the world works and we have swallowed it, hook, line and sinker. This story has not served women well. Now it's time to change it. A kind of feminist Freakonomics, Who Cooked Adam Smith' s Dinner? charts the myth of economic man—from its origins at Adam Smith's dinner table, its adaptation by the Chicago School, and its disastrous role in the 2008 Global Financial Crisis—in a witty and courageous dismantling of one of the biggest myths of our time.

A rigorous but nontechnical treatment of major topics in urban economics. Lectures on Urban Economics offers a rigorous but nontechnical treatment of major topics in urban economics. To make the book accessible to a broad range of readers, the analysis is diagrammatic rather than mathematical. Although nontechnical, the book relies on rigorous economic reasoning. In contrast to the cursory theoretical development often found in other textbooks, Lectures on Urban Economics offers thorough and exhaustive treatments of models relevant to each topic, with the goal of revealing the logic of economic reasoning while also teaching urban economics. Topics covered include reasons for the existence of cities, urban spatial structure, urban sprawl and land-use controls, freeway congestion, housing demand and tenure choice, housing policies, local public goods and services, pollution, crime, and quality of life. Footnotes throughout the book point to relevant exercises, which appear at the back of the book. These 22 extended exercises (containing 125 individual parts) develop numerical examples based on the models analyzed in the chapters. Lectures on Urban Economics is suitable for undergraduate use, as background reading for graduate students, or as a professional reference for economists and scholars interested in the urban economics perspective.
