In *The Jesuits*, Malachi Martin reveals for the first time the harrowing behind-the-scenes story of the "new" worldwide Society of Jesus. The leaders and the dupes; the blood and the pathos; the politics, the betrayals and the humiliations; the unheard-of alliances and compromises. *The Jesuits* tells a true story of today that is already changing the face of all our tomorrows.

*Television, Audiences and Cultural Studies* presents a multi-faceted exploration of audience research, in which David Morley draws on a rich body of empirical work to examine the emergence, development and future of television audience research. In addition to providing an

introductory overview from a cultural studies perspective, David Morley questions how class and cultural differences can affect how we interpret television, the significance of gender in the dynamics of domestic media consumption, how the media construct the 'national family', and how small-scale ethnographic studies can help us to understand the global-local dynamics of postmodern media systems. Morley's work reconceptualises the study of 'ideology' within the broader context of domestic communications, illuminating the role of the media in articulating public and private spheres of experience and in the social organisation of space, time and community.

The many crises that troubled them at the dawn of the millennium are a distant memory, the economy exists in balance with the environment, and work has become a personal choice. But how did we get here? How did we solve the great problems of the contemporary world, from climate change to the labor market crisis, from the gaping inequalities in wealth distribution to the spreading new populisms and nationalisms? Using a broad range of academic sources and an accessible writing style, Tabellini offers a vision of a prosperous future with its roots firmly in the present and its branches always in the realm of possibility.

Before the Internet became widely known as a global tool for terrorists, one perceptive U.S. citizen recognized its ominous potential. Armed with clear evidence of computer espionage, he began a highly personal

quest to expose a hidden network of spies that threatened national security. But would the authorities back him up? Cliff Stoll's dramatic firsthand account is "a computer-age detective story, instantly fascinating [and] astonishingly gripping" (Smithsonian). Cliff Stoll was an astronomer turned systems manager at Lawrence Berkeley Lab when a 75-cent accounting error alerted him to the presence of an unauthorized user on his system. The hacker's code name was "Hunter"—a mysterious invader who managed to break into U.S. computer systems and steal sensitive military and security information. Stoll began a one-man hunt of his own: spying on the spy. It was a dangerous game of deception, broken codes, satellites, and missile bases—a one-man sting operation that finally gained the attention of the CIA . . . and ultimately trapped an international spy ring fueled by cash, cocaine, and the KGB.

'What is a self and how can a self come out of inanimate matter?' This is the riddle that drove Douglas Hofstadter to write this extraordinary book. In order to impart his original and personal view on the core mystery of human existence - our intangible sensation of 'I'-ness - Hofstadter defines the playful yet seemingly paradoxical notion of 'strange loop', and explicates this idea using analogies from many disciplines.
