The empty set and the whole space are algebraic sets. $Y_1 = Z(T_1)$ and $Y_2 = Z(T_2)$, then $Y_1 \cup Y_2 = Z(T_1 T_2)$, where $T_1 T_2$ denotes the set of all products of an element of T_1 by an element of T_2 . Indeed, if $P \in Y_1 \cup Y_2$, then either $P \in Y_1$ or $P \in Y_2$, so P

Shortly after I entered graduate school, I was advised by a number of professors to go through Chapters II and III of Hartshorne's Algebraic Geometry

Online Library Hartshorne S Algebraic Geometry

thoroughly, solving all the exercises within.
As it turned out, there are some absurdly
difficult results that are given as exercises.
(Seriously, openness of the flat locus is an
exercise?)

(i) If $s_1, s_2 \in F(U)$ is such that $s_1|_{V_i} = s_2|_{V_i}$ for all i , then $s_1 = s_2$. (If $C = \mathbb{A}^1$, we can

Online Library Hartshorne S Algebraic Geometry

just check this for $s_2 = 0$.) (ii) Suppose we are given for each $i \in I$, an element $s_i \in F(V_i)$ such that for each $i, j \in I$, $s_i|_{V_i \cap V_j} = s_j|_{V_i \cap V_j}$. Then there exists an element $s \in F(U)$ such that $s|_{V_i} = s_i$ for each i . (The element s is unique by (i).)

We will start working in Chapter II of Hartshorne's Algebraic Geometry. 1. February 6. We will start in [HAG, section II.1]: sheaves. Exercises: 1.1 (3 pts), 1.2 (3 pts), 1.3 (3 pts), 1.4 (2 pts), 1.5 (2 pts) (all from chapter II). 2. February 13. We will finish section II.1 and start with locally ringed spaces.
