JIS K 6807: Test methods for formaldehyde resin liquid ...
Japanese regulation for formaldehyde emissions from wood panels is widely considered the most stringent in the world. Their JAS standards for plywood and Structural Panels (OSB) do not directly specify a limit for formaldehyde emissions. However, panels meeting the F**** standard for formaldehyde emissions (the most stringent requirement level) are required to have an average emission level below 0.30mg/l as tested to Japanese Standard JIS A 1460.

Global Regulations | APAwood - Europe
Japan has also defined formaldehyde emissions ratings using a different testing methodology. The Japanese JIS/JAS Formaldehyde Adhesive Emission Standards, defined by the set forth by the Japanese Industrial Standards (JIS) and Japanese Agricultural Standards (JAS) departments, the Desiccator Test Method measures emissions released from the wood. Ratings are assigned in four categories, F*, F**, F***, and F****, with F**** having the lowest level of formaldehyde emissions below 0.005 mg/m2h.

Formaldehyde Emissions - Learning Center
This resin when mixed with filler gives a glue mix suitable for the production of exterior plywood. The resultant bond quality will surpass the following international plywood standards namely British Standard, BS1455-WBP (Weather and Boil Proof) grade and Japanese Agricultural Standard, JAS Type 1. Hardener for Urea Formaldehyde Resin. Hardener is an active compound that reacts chemically with the glue to assist curing process during hot press.
