Stochastic Processes - Stanford University formulations, providing a number of examples, but roughly, by a stochastic op-timization problem we mean a numerical optimization problem that arises from observing data from some (random) data-generating process. We focus almost exclusively on first-order methods for the solution of these types of problems, as

Depending on whether the studied process is defined in discrete time or continuous time, the mathematical techniques are quite different. For that reason time series analysis is regarded as a separate field of statistics.
