The following concepts apply to layer 2 and layer 3 leaf-spine topologies: • Each leaf switch connects to every spine switch in the topology. • Servers, storage arrays, edge routers and similar devices always connect to leaf switches, never to spines. The layer 2 and layer 3 topologies each use two leaf switches at the top of each rack configured as a Virtual Link Trunking (VLT) pair. VLT allows all connections to be active while also providing fault tolerance.
