This is at least partly because the majority of firms view climate risk as a transverse risk that cuts across risk types such as credit, market and operational, as opposed to a principal risk. Firms are particularly concerned about their long-term resilience. While more than 80% of firms believe their strategy is resilient to climate change over the next five years, only 10% of firms are confident in their resilience beyond 15 years.

~~Second Annual Global Survey of Climate Risk Management at ...~~
As climate risk manifests itself through existing risk types (like credit risk and operational risk), practitioners need to consider how climate-driven financial risks can be embedded into current financial risk management frameworks. The GARP Risk Institute (GRI) recently undertook a global, cross-sectoral survey of firms' approaches to managing the financial risks associated with climate change.

~~Climate Risk Management at Financial Firms: Challenges ...~~
Financial risk management is the practice of protecting economic value in a firm by using financial instruments to manage exposure to risk: operational risk, credit risk and market risk, foreign exchange risk, shape risk, volatility risk, liquidity risk, inflation risk, business risk, legal risk, reputational risk, sector risk etc. Similar to general risk management, financial risk management requires identifying its sources, measuring it, and plans to address them.
