A Companion to the Archaeology of Religion in the Ancient World presents a comprehensive overview of a wide range of topics relating to the practices, expressions, and interactions of religion in antiquity, primarily in the Greco-Roman world. • Features readings that focus on religious experience and expression in the ancient world rather than solely on religious belief • Places a strong emphasis on domestic and individual religious practice • Represents the first time that the concept of “lived religion” is applied to the ancient history of religion and archaeology of religion • Includes cutting-edge data taken from top contemporary researchers and theorists in the field • Examines a large variety of themes and religious traditions across a wide geographical area and chronological span • Written to appeal equally to archaeologists and historians of religion

Electronic Commerce is a complete introduction to the world of electronic commerce, including balanced coverage of technical and business topics. Case studies and plentiful business examples complement conceptual coverage to provide a real-world context. Implementation strategies are analyzed, using examples of both successful and unsuccessful implementations.

This book provides up-to-date scientific information on the pathways by which psychosocial stress can affect the auditory system and describes current approaches to the management of patients with stress-related tinnitus. The latest evidence is presented on aspects such as the role of stress hormones in auditory function, the effects of allostatic load, circadian sensitivity to auditory trauma, and the association between stress-related biomarkers and tinnitus. The clinically oriented chapters discuss psychometric instruments of value in the tinnitus clinic and present stress-related tinnitus treatment protocols and outcome measures. It is widely acknowledged that the tinnitus percept acts as a stressor. However, it is also now evident that psychosocial stress can play a causative role in tinnitus and that the impact varies according to the level, duration, and quality of the stress. Assessment of the types and levels of stress in tinnitus patients before, during, and after treatment is therefore very important. Healthcare professionals attending tinnitus patients will benefit from the information that this book provides on the relationship between tinnitus and stress and from the practical guidance that it offers.

Social entrepreneurship is on the rise and social enterprises are solving some of the most critical and enduring social problems by using innovative, pragmatic and sustainable business models. Access to knowledge thanks to the Internet and rapid expansion of the knowledge economy are opening new opportunities for social ventures. With knowledge-based social entrepreneurship where knowledge is the primary resource, more pressing social problems can be addressed by using advanced technologies. This book investigates this emerging concept, possibilities that it holds, its place in today's economy, and links bridges between knowledge, innovation, and social entrepreneurship. Academics, entrepreneurs, students, and NGOs will find the theoretical and practical information presented in this book extremely valuable.

Claudia Carroll is already a major bestselling author in her native Ireland, and now she's ready to take America by storm with her poignantly hilarious new novel, I Never Fancied Him Anyway. Like her fellow countrywoman, New York Times bestselling novelist Marian Keyes, Carroll mixes outrageous humor with real emotion in this story of a hapless and loveless psychic who can see everyone's future but her own. I Never Fancied Him Anyway is already in the works as a major motion picture from the producer of The Devil Wears Prada and P.S. I Love You. Now is the time to discover this funny, quirky, romantic winner that everyone will soon be talking about.

White biotechnology is industrial biotechnology dealing with various biotech products through applications of microbes. The main application of white biotechnology is commercial production of various useful organic substances, such as acetic acid, citric acid, acetone, glycerine, etc., and antibiotics like penicillin, streptomycin, mitomycin, etc., and value added product through the use of microorganisms especially fungi and bacteria. The value-added products included bioactive compounds, secondary metabolites, pigments and industrially important enzymes for potential applications in agriculture, pharmaceuticals, medicine and allied sectors for human welfare. In the 21st century, techniques were developed to harness fungi to protect human health (through antibiotics, antimicrobial, immunosuppressive agents, value-added products etc.) which led to industrial scale production of enzymes, alkaloids, detergents, acids, biosurfactants. The first large-scale industrial applications of modern biotechnology have been made in the areas of food and animal feed production (agricultural/green biotechnology) and pharmaceuticals (medical/red biotechnology). In contrast, the production of bio-active compounds through fermentation or enzymatic conversion is known industrial or white biotechnology. The beneficial fungal strains may play important role in agriculture, industry and the medical sectors. The beneficial fungi play a significance role in plant growth promotion, and soil fertility using both, direct (solubilization of phosphorus, potassium and zinc; production of indole acetic acid, gibberellic acid, cytokinin and siderophores) and indirect (production of hydrolytic enzymes, siderophores, ammonia, hydrogen cyanides and antibiotics) mechanisms of plant growth promotion for sustainable agriculture. The fungal strains and their products (enzymes, bio-active compounds and secondary metabolites) are very useful for industry. The discovery of antibiotics is a milestone in the development of white biotechnology. Since then, white biotechnology has steadily developed and now plays a key role in several industrial sectors, providing both high valued nutraceuticals and pharmaceutical products. The fungal strains and bio-active compounds also play important role in the environmental cleaning. This volume covers the latest research developments related to value-added products in white biotechnology through fungi.

This book includes high-quality research papers presented at the Third International Conference on Innovative Computing and Communication (IICIC 2020), which is held at the Shaheed Sukhdev College of Business Studies, University of Delhi, Delhi, India, on 21-23 February, 2020. Introducing the innovative works of scientists, professors, research scholars, students and industrial experts in the field of computing and communication, the book promotes the transformation of fundamental research into institutional and industrialized research and the conversion of applied exploration into real-time applications.

This book aims to examine innovation in the fields of information technology, software engineering, industrial engineering, management engineering. Topics covered in this publication include; Information System Security, Privacy, Quality Assurance, High-Performance Computing and Information System Management and Integration. The book presents papers from The Second International Conference for Emerging Technologies Information Systems, Computing, and Management (ICM2012) which was held on December 1 to 2, 2012 in Hangzhou, China.
