Ford's 391 cubic inch big-block, manufactured from 1966 to 1978, is a member of the FT truck engine series --- closely related to the more common FE-Series. The FT-Series consists of the 330, 361 and 391 cubic inch engines and have differences related to their truck usage. FE and FT engines are first identified in the same manner, beginning with locating and decoding the engine casting number, then by noting differences unique to FT-series engines.

How to Identify a Ford 391 | It Still Runs

The Ford FE engine is a Ford V8 engine used in vehicles sold in the North American market between 1958 and 1976. The FE was introduced to replace the short-lived (in the USA) Ford Y-block engine, which American cars and trucks were outgrowing. It was designed with room to be significantly expanded, and manufactured both as a top-oiler and

These specs are for stock-type bolts with light engine oil applied to the threads and the underside of the bolt head. Moly and other lubes offer reduced friction and increased bolt tension, which will affect the torque figure. If you use aftermarket performance bolts like ARP's, you should follow the recommended torque specifications.

Ford Big Block (FE Series) Torque Specs

This engine also beats out all competitors with a best-in-class* available tow rating of 14,000 lbs. Features include the Ford port-fuel and direct-injection (PFDI) system with two injectors per cylinder - one in the air intake port, another inside the cylinder -
