This book is organized around the 'four pillars' of TCM diagnosis: inspection, inquiry, listening and smelling, and palpation. In this text, each aspect is explained in a clear and systematic manner, with generous use of tables and illustrations. This is followed by a series of review questions for deeper understanding. A comprehensive self-examination consisting of 200 multiple choice questions, with a separate key to the answers, tests the reader's understanding of the important points of each aspect of diagnosis. These questions, many of which are presented in case study format, will help students prepare for the board exams.

This book is designed as a study guide for either students or practitioners needing additional information on basic TCM theory. It is also designed to be extremely helpful for those preparing for the basic TCM theory portion of the NCCAOM exam. The book is divided into seven tests containing 125 questions each. Each test includes an answer sheet and an answer key. Practitioners may also find the information contained in this book useful in their everyday clinical practice.

This translation of the original Chinese text provides a guide to clinical examination and differential diagnosis in traditional Chinese medicine. It examines the diagnostic method used in traditional Chinese medicine and relates it to T CM syndromes. Colour plates illuminate key diagnostic signs.

The first book to exclusively use Chinese medical theories and terminology to guide practitioners of Chinese medicine in the use of Western herbs • Written entirely according to the theory, diagnosis, and treatment paradigm of traditional Chinese medicine (TCM) • Explains how to combine and modify the standard TCM formulas to non-Chinese herbs suitable for Western practitioners • Includes 58 monographs of common Western healing herbs, detailing how each plant is used clinically The ever-growing number of Chinese medicine practitioners in the West has brought about an amalgamation of many styles of Chinese medicine and various other forms of medicine from around the world. This book addresses the increasing demand for knowledge of how to integrate plants from outside the standard Chinese materia medica into the fold of Chinese medical practices in the West. It is the first in-depth guide to using Western herbs exclusively according to the theories, diagnoses, and treatments of traditional Chinese medicine that harmonizes the unique terminology and theories of TCM with other botanical medicines. The book contains 58 monographs, illustrated with full-color photographs, of herbs commonly used by Western herbalists. Each herb is grouped by the basic categorization for medicinals in Chinese medicine, such as Herbs that Resolve the Exterior and Herbs that Regulate Blood. The monographs detail the energetics, function and indication, channels entered, dosage and preparation, and contraindications of each plant. The author also explains how to use the herbs to modify standard formulas used in everyday Chinese herbal medicine, based on his own clinical experience. An appendix of Western Analogs for Chinese Herbs further highlights 40 Chinese medicinals that have related species growing in the West.

Traditional Chinese medicine has a long and complex history, yet the basic principles at the heart of practice have remained the same for hundreds of years. Without a solid understanding of these fundamental theories, effective practice is impossible, and this book provides a complete introduction to everything that students and practitioners, both new and experienced, need to know. The book describes and explains all of the fundamental principles of Traditional Chinese Medicine, including yin/yang, the five elements, the 'zang and fu' organs, Zang Xiang, Qi, and the meridians and collaterals of the body. Explaining not only the principles upon which these elements work, but also how they interrelate, the book describes how they can be used in practice to identify, treat and prevent ill-health and disease. This thorough and accessible textbook, compiled by the China Beijing International Acupuncture Training Center (BIATC), under the editorial directorship of leading Chinese clinicians Zhu Bing and Wang Hongcai, is essential reading for students of traditional Chinese medicine, and is also a useful basic reference for TCM practitioners.

Paradigm Publications brings the medicine and healing of the Oriental tradition to English-speaking readers. Our work is based on the premise that the West will successfully absorb Oriental traditional healing arts only by honoring the respect for language, tradition, and nature on which they were founded. Seeking to accurately transmit an Asian expertise that is rooted in bedside skills and highly trained sensory observations, our books for clinical professionals are produced by cooperative teams of Asian and Western clinical experts, scholars, and linguists. By adhering to voluntary, multi-author, multi-publisher standards, these works become part of a valuable library that is not limited by the interests of any one author or publisher. Based on similar principles, our books for discriminating readers offer the simple utility people need to apply these arts to their lives.The only English language ed. of the 16th-c. classic available.
