A thermal system is a family of isolated systems of one independent variable—energy. Each member in this family is a distinct isolated system, has a fixed value of energy, and flips among the quantum states in its own sample space. We describe a family of isolated systems using several additional

Thermodynamics is a science and, more importantly, an engineering tool used to describe processes that involve changes in temperature, transformation of energy, and the relationships between heat and work. It can be regarded as a generalization of an enormous body of empirical evidence 1. 1. It is extremely general: there are no hypotheses made concerning the structure and type of matter that we deal with.
